

CONSULTANT LUBRICANTS, INC.

"The Solution Is Science"®

University of Missouri Research Park
9 Research Park Drive
St. Charles, MO 63304-5685

Consultant Lubricants, Inc. has been developing custom lubricant formulations and manufacturing advanced metalworking fluids for over forty years.

Custom Formulation Services

"The Solution Is Science"®

Top 4 Metalworking Fluid Challenges... and the Solution!

- 1) **Industry Is Always Changing** - In general, lubrication technology has not kept pace with the most recent demands of industry. Current solutions come from companies like CLI, that are continuously solving current challenges and requirements through consultation and custom formulation.
- 2) **Your Operation Is Unique** - Every operation has its own basic requirements to run successfully. But, there is a huge difference between this and running optimally. We optimize our products based on the specific requirements of your final parts, taking in to consideration the impact of every stage.
- 3) **Costs Add Up - So Do Benefits** - If you can eliminate a washing stage, recoat your dies less often, require less labor or rework and therefore scrap less parts, the impact on your profits can be huge!
- 4) **Custom Does Not Cost More** - When we consult with a Plant Manager, we start at the beginning of understanding your process, but we don't start from scratch with formulation. Our signature blends have over 40 years of evolution and refinement and usually only require a slight adjustment for you.

THE ADVENTURES OF GEORGE & RALPH

We are having Consultant Lubricants develop a custom formula for our shop.

Can we call it, George & Ralph's Secret Sauce?

Not sure, Ralph. They start with CLI3900 which is already awesome!

Then they just change the label?

No, they evaluate our operation and determine what adjustments will provide optimum performance & savings!

THEN! they change the label.

Consultant Lubricants has decades of support to our customers with responsive support, on-site consultation services and an in-house lab and testing facility. By partnering with our customers to assess their unique industrial challenges we can provide targeted solutions through advanced diagnostic formulation.

Continual improvement and refinement of our formulas through real world solutions is the cornerstone of our

success. Surprisingly, companies will spend thousands of dollars on their equipment, but will seek cheap alternatives for the lubrication that interfaces with their product, costing them more in the end.

Our clients have significantly improved their profit margins through reducing tooling costs, down time, scrap rates, additional labor, maintenance expenses, and often eliminating unnecessary production steps.
